

RANDOMIZE PATIENTS AND AUTOMATE SUPPLY

DATATRAK ONE[®] **UX Randomization and Trial Supply Management[™]** supports all types of protocol requirements while dispensing, controlling and automating drug supply fulfillment. The robust Manager tool lets users view, filter, update and export information on drug containers, drug assignments, shipments and randomization schedules on demand.

DATATRAK ONE[®] **UX Randomization and Trial Supply Management[™]** makes randomization and supply management easy.

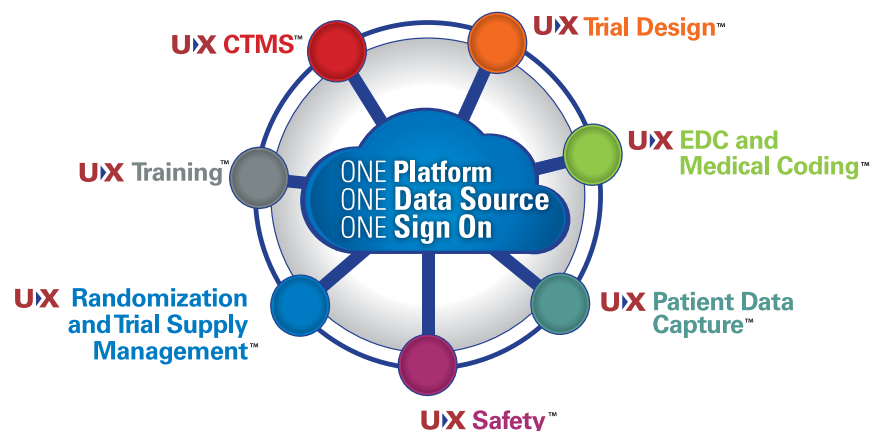

UNIFIED EXPERIENCE[™]

The DATATRAK ONE[®] *Unified Experience[™]* removes complexities in clinical research through our eClinical solutions and services, delivering time and cost savings while safely accelerating your trial.

The DATATRAK ONE[®] Unified Platform is the foundation of our efficiencies, providing a single data

source that powers all DATATRAK solutions, eliminating data integration.

DATATRAK Clinical Consulting Services (DCCS) provides expertise across all trial phases and types. Our customer-centric approach keeps the focus on the individual needs of each trial.

SIMPLE AND POWERFUL RANDOMIZATION

Real-time checks against live clinical data ensure that randomization schedules are cleanly executed while powerful minimization algorithms can optimize enrollment.

CUSTOM APPLICATION BASED ON THE NEEDS OF YOUR TRIAL

Implement simple randomization schedules to complex algorithms based on the protocol specifications.

AUTOMATE DRUG ASSIGNMENT AND INVENTORY MANAGEMENT

Automatically assign drug at the point of randomization, at a single visit, or across multiple visits. Inventory management utilities allow users to define automatic resupply events and track shipments.

ADAPTIVE TRIAL DESIGN

Easily manage change to drug supply and shipment strategies.

LEVERAGE BLINDED AND UN-BLINDED ROLES

Control the visibility of information in inventory and randomization events through blinded and unblinded user roles.
